## Scope

This document specifies supported mobile devices for the following Fiserv mobile banking solutions: Configure Digital, Create Digital, Mobiliti ASP and Mobiliti Business ASP.

Fiserv uses a formal process for assuring optimal usability of mobile banking apps across a broad range of devices in the US market. The Mobile Banking Supported Device List outlines support for devices that mobile banking users are currently using and the devices we predict they will begin using between now and the next update to this document.

Mobile Banking Support Device List (SDL) criteria:

1. Include the 70% most used devices based on actual mobile banking user connections for the solutions noted above.
2. Include new devices released or soon to be released that are expected to attain significant utilization.
3. Exclude older device models when actual user connections on that model are very low and/or the device no longer runs a minimum supported OS version.

**This document lists devices supported for versions of Fiserv mobile banking apps released after the effective date of this document. App versions with release dates that predate the effective date of the document and/or predate the date new devices are added may not support all listed devices.**

Devices not listed may function; however, they are not explicitly supported on any current or previous version of Fiserv mobile banking apps. Some devices not explicitly tested or listed as supported may still function as intended with the mobile banking apps, however, there is no guarantee that they will.

For a particular mobile device model, a manufacturer may provide different versions of hardware, firmware, and operating system (OS) software. This practice is common, particularly for phones that are released into different geographic territories. These different versions of the same phone model may operate differently from the model version that has been assessed for the purposes of its inclusion in this document and may not perform as expected.

**Note:** Some features that are described in this document may not be available to every financial institution or mobile banking solution. Feature availability depends on the financial institution's mobile banking solution, host, core, online banking solution, implementation configuration and/or service package.

## Tablet Support

**Note:** Not all Fiserv mobile banking solutions offer apps optimized for the tablet form factor.

The tablet market is consolidated around a small number of form factors, screen resolutions, and chipsets. A device may be included in the Mobile Banking Supported Device List as for tablet apps if it meets the following criteria in addition to the criteria 1 – 3 above:

1. Apple: Apple iPad devices are included in the list.
2. Android: The device has a minimum screen size of 7" diagonal. Devices with screen sizes below 7" are supported by the phone channel. The device supports the Google Play store.

# Operating System, Hardware, Channel, Browser and Network Support

## Minimum Device Operating System Support

- Minimum iOS Versions Supported – iOS 17\*, iPadOS 17\*
- Minimum Android Version Supported - Android 12.0\*\*

To ensure the highest levels of security, devices that do not support the minimum supported operating system (OS) version may be prevented from installing and/or using the mobile banking app.

OS updates made generally available by Apple and Google at the time of publication of this document are supported by app versions released after the effective date of this document.

Only devices running an unmodified version of the manufacturer-supplied OS are supported.

**Note:** Beta releases of Apple and Android operating systems are not supported.

\* Apple devices that support a maximum OS of iOS 15/iPadOS 15 or iOS 16/iPadOS 16 will continue to be able to download apps from the app store. Any defects that are exclusive to iOS 15/iPadOS 15, iOS 16/iPadOS 16 OS and/or devices that only support OS versions below iOS 17 will not be addressed.

\*\* Android devices that support a maximum OS of Android 11 will continue to be able to download apps from Google Play. Any defects that are exclusive to Android 11 and/or devices that only support OS versions below Android 12 will not be addressed.

## Hardware, Channel and Browser Support

- Android “Developer options” settings, including USB Debugging, are not supported
- Jailbroken/rooted devices and MITM interception are not supported
- The latest versions of Chrome and Safari browsers are supported. Beta versions are not supported

## Supported App Stores

Apple App Store and Google Play are supported.

## Network Support

Mobile Banking only supports TLS 1.2 and higher for app communications. Any device or browser that does not support at least TLS 1.2 will not be able to connect to Mobile Banking services.

The Mobile banking products can operate on any unrestricted TCP/IP data network. Operation on restricted networks (for example, where a firewall might be in place) is not guaranteed.

The Mobile banking product supports Tier 1 carriers in the U.S., including AT&T®, Verizon®, T-Mobile®/Sprint®, and US Cellular®. Mobile banking support for non-Tier 1 carriers depends on the contractual agreement between the SMS gateway provider (aggregator) and the individual carrier.

## Supported Devices

### Apple Phones
